American Institute of Nutrition AIN-93 Diet

AIN-93 Purified Diets

For sixteen years, the American Institute of Nutrition Rodent Diets, AIN-76 and AIN-76A, have been used extensively around the world. Because of numerous nutritional and technical problems encountered with the diet during this period, it was revised. Two new formulations were derived: AIN-93G for growth, pregnancy, and lactation; and AIN-93M for adult maintenance. Some major differences in the new formulation of AIN-93G compared with AIN-76A are as follows:

7 grams soybean oil/100 grams diet was substituted for 5 grams corn oil/100 grams diet to increase the amount of linolenic acid; corn-starch was substituted for sucrose; the amount of phosphorus was reduced to help eliminate the problem of kidney calcification in female rats; L-cystine was substituted for DL-methionine as the amino acid supplement for casein, known to be deficient in the sulfur amino acids; manganese concentration was lowered to one fifth the amount in the old diet; the amounts of Vitamin E, Vitamin K, and Vitamin B₁₂ were increased; and molybdenum, silicon, fluoride, nickel, boron, lithium, and vanadium were added to the mineral mix. For the AIN-93M maintenance diet, the amount of fat was lowered to 40 g/kg diet from 70 g/kg diet, and the amount of casein to 140 g/kg from 200 g/kg in the AIN-93G diet. Because of a better balance of essential nutrients, the AIN-93 diets may prove to be a better choice than AIN-93A for long-term as well as short-term studies with laboratory rodents. *J. Nutr.*, v. **123**: 1939-1951 (1993).

Composition of the AIN-93M (For Maintenance of adult rodents):

Ingredient	Amount
Casein	14.0000%
Dextrinized Cornstarch	15.5%
Sucrose	10.0%
Corn Starch	46.5692%
Alphacel, Non-Nutritive Bulk	5.0%
Soybean Oil	4.0%
AIN-93M Mineral Mix	3.5%
L-Cystine	0.18%
AIN-93-VX Vitamin Mix	1.0%
Choline bitartrate	0.25%
tert-Butylhydroquinone	0.0008%

Due to the addition of dextrinized cornstarch replacing most of the sucrose in the AIN-76 diet, the pellets will be small.

Composition of the AIN-93G (For growth, pregnancy, and lactational phases of rodents):

Ingredient	Amount
Casein	20.00%
Dextrinized Cornstarch	13.20%
Sucrose	10.0%
Corn Starch	39.7486%
Alphacel, Non-Nutritive Bulk	5.0%
Soybean Oil	7%
AIN-93G Mineral Mix	3.5%
L-Cystine	0.3%
AIN-93-VX Vitamin Mix	1.0%

Choline bitartrate	0.25%
tert-Butylhydroquinone	0.0014%

Due to the addition of dextrinized cornstarch replacing most of the sucrose in the AIN-76 diet, the pellets will be small.
